Spring_Way test instructions:

How to use our project:
1. Open the project using Intellij.
2. Tap on Edit Configurations… under running project on the toolbar

3. Define program arguments in the following way:
   Insert a single parameter – path of source project you want our project will convert.

*Verify the path of the source project is not contains any spaces at all.

4. We will create for you a new folder contain the converted project, please follow the next steps:
   - In case your converted project is not recognize spring dependencies, please remove spring dependencies, wait 10 seconds and return the dependencies.
   - In case some of your objects are not recognize by Intellij (got an error of: 'class cannot access') please tap on the upper menu in Intellij on File -> Invalid caches and restart.

   - Please open the converted project and use reformat for your module:

Steps: Tap left click on your module -> tap on Reformat Code

Please check in all following 3 checkboxes:

-Please configure your Intellij to auto-imports:
Intellij -> Preference -> Editor -> General ->Auto Imports

Enjoy, thanks.
